

614 Message Greeter

Overview

The Marsh Products 614 Message Greeter is, without question, the most powerful and flexible audible message system available. Ideal for Drive-Thru communication systems such as Fast Food, Banking, Pharmacy or applications where audible advertisements are required.

The 614 message greeter accepts a dry contact closure to trigger any one of 9 recorded messages with clear crisp audio output inserting the audio message into an existing audio channel. Any one of the nine messages can be manually selected or predetermined based on the time of day to inserted into the audio channel when

the switch closure is triggered. The 614 allows you to program a different message to be output at different times of day, at the desired volume at just the right time.

One message can be recorded to output during the breakfast hours and a different message output during the lunch and dinner hours, and again a different message for after hours when the business is closed. Messages can also be programmed to repeat. All in all, nine messages can be programmed into 9 different day parts for each day of the week. All of this flexibility is easily setup and configured using the systems keypad and LCD display or personal computer.

614 Message Greeter

Features

- 8 programmable 25 second message slots
- 1 programmable 40 second message slots
- 9 Programmable day parts for each day of the week (63 day parts in all)
- Programmable volume control for each day part.
- 0 to 99 second Programmable delay for each day part.
- Message repeating for each day part
- 0 to 99 second Programmable repeat delay for each day part.
- RS485 communications port for connection with Personal computer
- All settings, including messages are stored in non-volatile memory
- Internal battery backed up date/time clock
- 2 line by 16 character LCD display
- 16 Key keypad for easy programming
- Built in AGC (Automatic Gain Control)
- Built in low pass filtering
